No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

epitope Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide or its analog.

Claim 10; Page 6; 43pp; English.

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinisting hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promisecuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer),

Novel synthetic immunogen for inducing immune response against
gonadotropin releasing hormone, comprises fusion peptide having
promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprises a function releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as cancer (of the breast, uterus and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), prostate cancer. The immunogen is effective in eliciting high and specific anti-GrRH antibody Litres. The present sequence is a synthetic spacer peptide used in the immunogen of the invention
                                                                                                                              luteinising hormone releasing hormone; LHRH; contraceptive; promiscuous helper T-cell peptide epitope; humannomimic peptide epitope; breast cancer; uterine cancer; gynaecological cancer; endometriosis; uterine fibroid; benign prostatic hypertrophy; prostate cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Common Beta chain; Beta-c; binding motif; cancer; therapeutic; acute myeloid leukaemia; AML; inflammatory disease; asthma; rheumatoid arthritis; cell proliferative disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Compositions comprising polypeptides and polypucleotides for stimulating the immune system and for treating malignancies associated with overexpression of the HER-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to compositions for stimulating the immune system and for treating malignancies associated with overexpression of the HER-2 protein. The compositions comprise immunogenic groups of the HER-2 proteins. The present sequence is one such peptide used in the compositions of the present invention. The compositions can be used for treating cancer, e.g. breast, ovarian, lung, prostate and colon cancers
endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRM antibody titres. The present sequence is a synthetic spacer peptide used in the immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention describes an isolated peptide of 100 amino acids or less in size. The peptide is useful for treating a disease state, e.g. cancer, arthritis, diabetes, inflammatory disease, atherosclerosis, autoimmune disease, bacterial infection, viral infection, cardiovascular disease or degenerative disease. This sequence represents a human targeting peptide selective for human organs, tissues or cell types
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is a conserved region of the yeast protein kinase designated HRR25. Nucleic acid probes may be synthesised based on this sequence and then used to identify sequences encoding HRR25-like protein
                                                                                                                                                      New targeting peptides identified by phage display, useful for treating disease state, e.g. cancer, diabetes, inflammatory disease, atherosclerosis, autonommune disease, bacterial or viral infection or cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wild-type and mutant protein kinase genes and encoded polypeptide(s) -
Useful in screening for compositions which may effect DNA double strand
break repair activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents the amino acid sequence of binding motif #15 used in study of a binding motif (1) of a receptor capable of binding a vortpblasmic protein. (1) comprises an amino acid sequence in which at least one amino acid is serine/threonine. An antagonist to the interaction of (1) to a cytoplasmic protein is useful as a cancer therapoutic, especially for preventing or treating leukaemia such as acute myeloid leukaemia (AML), and inflammatory diseases e.g., asthma and rheumatoid arthritis, and for preventing functions related to cell activation. The interaction of (1) and cytoplasmic protein is useful as a tool for treating and preventing cell proliferative diseases such as AML and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                New binding motif of a receptor capable of binding to cytoplasmic protein, for use as a tool for treating and preventing cell proliferative diseases such as acute myeloid leukemia and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Targetting peptide selective for human organ, tissue or cell type #26.

kinases. Host cells stably transformed with the protein kinase encoding DNA may be used for the expression of the protein kinase such that the expressed protein is "displayed" on the host cell surface. The cells may then be used as immunogen for the production of the protein kinase, the expressed protein being either isolated from the cells surface or from the culture medium. Recombinant HRR25 like proteins display a number of properties which are unique among the eukaryotic protein made or the protein possesses both protein-tyrosine kinase and protein-serine/threonine kinase activities. Also, HRR25 operates to promote repair of DNA strand breaks at a specific mucleotide sequence and is the only protein kinase known to have such recombination/repair promoting activity. Recombinant HRR25-like proteins and host cells expressing them are useful in screening methods designed to examine the effects of various compositions. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence representing a conserved region of AA residues in HRR25 which can be used to identify HRR25-like genes from other spp. This conserved motif can be used as a probe for identification and isolation of HRR25-like genes (homologs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New monoclonal antibodies against human casein Kinase class I enzymes - useful for purifcn, and determn. of these enzymes and to modulate their receptor -ligand binding, also new hybridomas.

The chimeric peptide is used in immunogenic compositions which induce an immune response against non-typable Haemophilus influenzae. This sequence represents an example of the linker sequence used to generate the chimeric peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic chimeric fimbrin peptide - useful for vaccination against non-
typable Haemophilus influenzae.

                                                                                                                                                                                                                                                    The invention relates to a synthetic chimeric fimbrin peptide. The peptide is useful for treating a non-typable Haemophilus influenzae (NTHi, infrection and outtis media. The synthetic peptides do not require tedious purification techniques. The present sequence represents the amino acid sequence of a chimeric fimbrin peptide, peptide linker.
                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                               chimeric fimbrin peptide, useful for treating Haemophilus
                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        epitope, vaccine, otitis media, auditory, ; linker.

This sequence represents an apoptotic protease activating factor-2 (Apaf-2) tryptic peptide which corresponds to residues 28-32 of human cytochrome c. The invention relates to an in vitro model for studying the regulation of apoptosis. Compositions are assayed in vitro for regulation of apoptosis. Compositions are assayed in vitro for regulation of apoptosis. Compositions are assayed in vitro for regulation of apoptosis, from a multicellular eukaryote; (b) adding test composition to (A); (c) preparing control assays comprising (A) and a known inhibitor or known inducer of apoptosis, or a compound known to have no effect on apoptosis; (d) assessing either (i) activation of apoptosis from an increase in cytosolic cytochrome c; CPP32 protease activity or ability to fragment genomic DNA, relative to system without added test compounds or (ii) inhibition of apoptosis by a reduction in these quantities in a mixture containing a known inducer, relative to to control without test compound. The test is parformed on mammalian cells, specifically HeLa cells. Cytochrome c is determined by immunoassay and
                                                                                                                                                                                                                                                                                                             ò
                               The invention relates to a synthetic chimaeric fimbrin peptide LB1 or LB2 comprises a first peptide unit derived from H. influenzae fimbrin, a second peptide unit containing a real epitope and a third linker peptide which connects the first peptide to the second. The chimmeric peptide is useful for inducing an immune response in animals against nontypable Haemophilus influenzae (NTHi) and for preventing or reducing adherence of NTHi to host cells thereby preventing or reducing the severity of otitis media. The present sequence is a synthetic linker peptide for use in the chimmeric peptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cell-free assay to identify compositions that regulate apoptosis - from their effect on e.g. cytosolic cytochrome c levels in cellular extracts, particularly to identify antitumour agents.
                                                                                                                                                                                                                                                                                                           Gaps

CPP32 by adding radiolabelled poly(adenosine diphosphate-ribose)

polymerase (PARP) or labelled sterol regulatory binding protein (SREBP),

and then detecting fragments of these compounds by sodium dedecytaulphate

polyacrylamid gel electrophoresis (SDS-PAGE). DNA fragmentation is

determined by adding inter mammalian cell nuclei, incubating, extracting

genomic DNA and analysing its size distribution. The extract contains

cenough dATP and/or corresponding diphosphate (dADP) to allow induction of

an apoptotic response. dATP and soluble cytochrome c are required for

initiation of apoptosis in the cell-free system. The method is especially

cused to identify chemotherapeutic agents that can induce apoptosis in

tumour cells even when these express the Bcl-2 protein associated with

resistance to chemotherapy. Compounds identified this way may also (a)

improve the effect of apoptosis-inducing chemotherapeutic agents or (b)

antegonise decoxyadenosine triphosphate (dATP) in the cytosol of patients

with adenosine deaminase deficiency (severe combined immune deficiency),

as a potential treatment for this condition. Unlike known methods, this

process does not use cells in which the apoptotic pathway has already

been inducing factors or other conditions

inducing factors or other conditions

corticotropin-releasing factor-2 (CRF2). The CRF2 peptides have the following activities: myopathic, osteopathic, hypotensive, cardiant, cardiant, vasotropid, antimigratine, cerebroprorective, neuropid, antimigratine, cerebroprorective, neuropid, antimigratine, cerebroprorective, neuropid, antidiabetic, analgesic, antiallergic, tranquilizer, anxiolytic, antidiabetic, analgesic, antiallergic, tranquilizer, anxiolytic, antidepressant, and antiarthritic. The CRF2 peptides, and created compounds derived from other proteins, are used to prevent or treat disorders modulated by the GRF2 receptor, e.g. skeletal muscle atrophy or wasting, and bone disorders, however caused, heart discal carophy or wasting, and bone disorders, however caused, heart attack, reportusion injury, migraine, stroke, memory loss, Alzheimer's disease, dementia); joint disorders (osteoarthritis or rheumatoid arthritis); con metabolic disease (obesity or diabetes); pain; allergy; stress; anxiety; con levels of adrenocorticotrophic hormone; anorexia nervosa; depression; also to reduce body temperature and to control appetite or cognitive coppities are used as primers and probes for amplification, also for gene synthesis and for recombinant production of GRF2 peptides are used to confirm disorders are used as primers and probes for amplification, also for gene cynthesis and for recombinant production of GRF2 peptides are used to evaluate expression of the CRF2 peptides are used to evaluate expression of the CRF2 peptides are used to sequence represents a novel native GRF polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

The invention relates to a novel non-native peptide derived from corticotropin-releasing factor-2 (GRF2). The non-native GRF2 peptides carticotropin-releasing factor-2 (GRF2). The non-native GRF2 peptides cardiant, vasotropic, antimigraine, cereboptinic, hypotensive, cardiant, vasotropic, antidiabetic, analgesic, antiallergic, transpullizer, antidiapressant, and antiarthritic. The non-native CRF2 peptides, and related compounds derived from other proteins, are used to prevent or treat disorders modulated by the CRF2 receptor, e.g. skeletal muscle arrophy or wasting, and hone disorders, however caused, heart circulatory diseases (e.g. hypertension, congestive heart failure, heart disorders (e.g. hypertension, congestive heart failure, and seases, demential); joint disorders (obsectoarthritis or rheumatoid arthritis); metabolic disease (obseity or diabetes); pain; allergy, stress, anxiety, low levels of adrenocorticotrophic hormone, another and to present nearther and to consist a marrier and to consist a marrier or consist anxiety, low levels of adrenocorticotrophic hormone, and an arrier and to consist anxiety and the consist anxiety anxiet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                          control appetite or cognitive function. Nucleic acids, optionally labelled, that encode the non-native CRF2 peptides are used as primers and production of zero amplification, also for gene synthesis and for recombinant production of the non-native CRF2 peptides, including use in gene therapy. Antibodies specific for the non-native CRF2 peptides are used to evaluate expression of the CRF2 non-native peptides after gene therapy. This sequence represents a CRF2 non-native polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "Leu-CHO; i.e. the terminal COOH group is replaced by an aldehyde group" \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Braap, inhibitor; branched chain amino acid protease; MPC; multicatalytic proteinase complex; intracellular proteolysis; mitosis; cachexia; autoimmune diseases; transplant rejection; peptidyl aldehyde;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The humanized mouse monoclonal antibody OKT3 is engineered to contain a human Fc region. By transferring the binding specificity into a human framework, the immunogenicity is reduced without affecting the immunosuppressive activity. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                 New peptidyl aldehydes are provided which are of general formula Z-P4-P3-P2-P1-CHO, in which P1-CHO is reduced Leu, Val or Ile, P2 is Phe or Ala, P3 is Gly, and Z is benzyloxy-carbonyl, benzoylglychne, tert-Dutoxycarbonyl and Z is benzyloxy-carbonyl, inhibitors of the BrAbe component of the multicatalytic proteinase complex (MPC). They are thus useful for inhibiting undesired intracellular proteolysis and mitosis in excessively proliferating cells, such as in cachexia, and inhibiting unwanted immune response, such as in autoimmune diseases and transplant rejection. The present sequence represents one of three preferred peptides fitting the above general
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New humanised OKT3 antibody with mutated Fc receptor binding region - useful as immunosuppressant to reduce transplant rejection, lacks the T-cell activating side effects of wild type antibody.
        New peptidyl aldehyde cpds. - are inhibitors of the BrAAP component of
the multi:catalytic proteinase complex.
                                                                                                                                                                                                                                                                                                                                       Gaps

Sequence 15, Application US/09741148A
Patent No. US20020076750A1
GENERAL INFORMATION:
APPLICANT: Chunhua YAN et al.
TITLE OF INVENTION: ISOLATED HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: AND USES THEREOF
FILE REPERENCE: CLOO056
CURRENT APPLICATION NUMBER: US/09/741,148A
CURRENT FILING DATE: 2002-04-15
PRIOR APPLICATION NUMBER: 60,206,982
PRIOR FILING DATE: 2000-05-25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            dele CATALYTIC ACTIVATY: Dethiobiotin + sulfur = biotin.
-|- CATALYTIC Biotin UTY: Dethiobiotin + sulfur = biotin.
-|- PATHWAY: Biotin biosynthesis; last step.
-|- SIMILARITY: Belongs to the biotin and lipoic acid synthetases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

The physiological role of the lymphoid system. VI. The stimulatory effect of leucophilic gamma globulin (leucokinin) on the phagocytic activity of human polymorphonuclear leucocyte.";
Blochemistry 6:3386-3392(1967).
--- MISCELLARNEOUS: An IgG (called leucokinin) binds reversibly to the cell membrane of neutrophils in the blood. Leucokininase on the membrane releases the active peptide tuftsin from the gamma chain. Tuftsin is essential for maximum stimulation of the phagocytic activity of neutrophils.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-08-206-789-5
US-08-206-789-5
i Sequence 5, Application US/08206789
patent No. 5580854
GENERAL INFORMATION:
APPLICANT: Orlowski, Marian
APPLICANT: Orlowski, Marian
APPLICANT: Vinitsky, Alexander
ITILE OF INVENTION: SUBSTRATE-ALDEHYDE
ITILE OF INVENTION: INBIBITORS OF THE PROTECUTIC ACTIVITY OF THE
ITILE OF INVENTION: MILICATALYIC PROTEINASE COMPLEX
NUMBER OF SEQUENCES:
ADDRESSEE: BRUNBAUGH, GRAVES, DONOHUE &
ADDRESSEE: BRUNBAUGH, GRAVES, DONOHUE &
CITY: New York
STATE: New York

Sequence 35, Application US/08685589A
Patent No. 5916872
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Chang, Conway
APPLICANT: Chang, Leo
TITLE OF INVENTION: SPECTRUM ANTIMICROBIAL ACTIVITY
NUMBER OF SEQUENCES:
CORRESPONDED ADDRESS:
ADDRESSEE: Pennie & Edmonds LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STATE: New YOLK

COUNTRY: USA

IP: 10036

COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATCHIN RELEASE #1.0, Version #1.30

Patent No. 5747457

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: FILDING-HABERMANN, BRUNHILDE

APPLICANT: RIPPMANN, FRIEDRICH

APPLICANT: RIPPMANN, FRIEDRICH

TILLE OF INVENTION: Linear Adhesion Inhibitors

NUMBER OF SEQUENCES: 228

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE PATENTIN Release #1.0, Version #1.30 (EPO)

SUFFREDRICHION NUMBER: US/08/329,820

FILING DATE: 27-OCT-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              66.7%; Score 14; DB 1; Length 4; 66.7%; Pred. A;Accession: A93750
A;Molecule type: protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A, Residues: 1-3 <GRI>
A, Note: a peptide with the chromatographic and electrophoretic characteristics of thyroll atidine, or glutamic acid
C; Superfamily: thyroliberin precursor
C; Keywords: amidated carboxyl end; cutaneous gland; hormone; hypothalamus; pyroglutamic F; 1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bra
